# About 关于本内容

## I. 传统编译器

- History of Compiler - 编译器的发展
- GCC process and principle – GCC 编译过程和原理
- LLVM/Clang process and principle – LLVM 编译过程和原理

## 2. AI编译器

- History of AI Compiler – AI编译器的发展
- Base Common architecture – AI编译器的通用架构
- Different and challenge of the future – 与传统编译器的区别，未来的挑战与思考

# 两大开源编译器的 相爱与相杀

# 两大开源编译器的 恩怨情仇

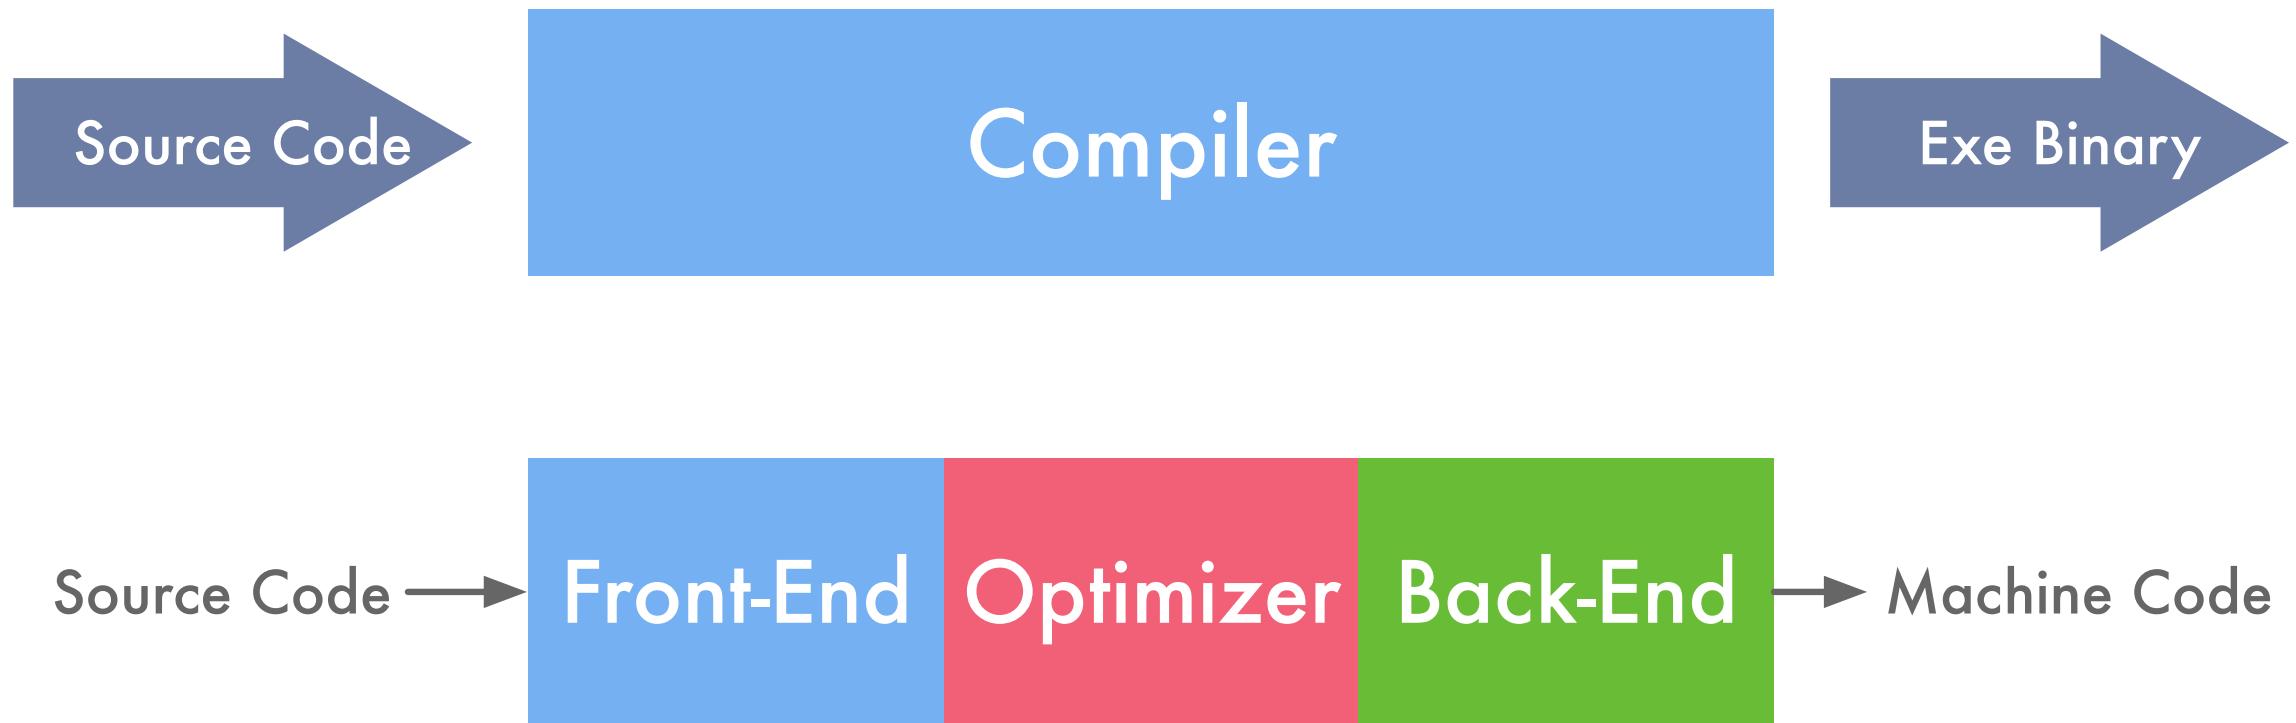

# What is Compiler 编译器是什么

- In computing, a compiler is a computer program that translates computer code written in one programming language into another language. The name "compiler" is primarily used for programs that translate source code from a high-level programming language to a lower level language to create an executable program.

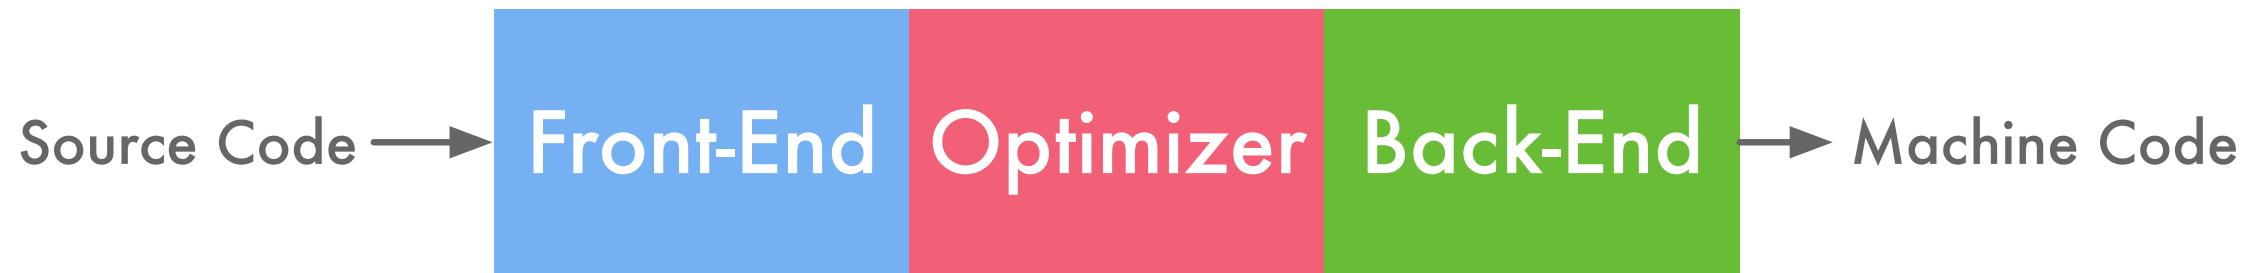

# Compiler basic constitution 编译器基本构成

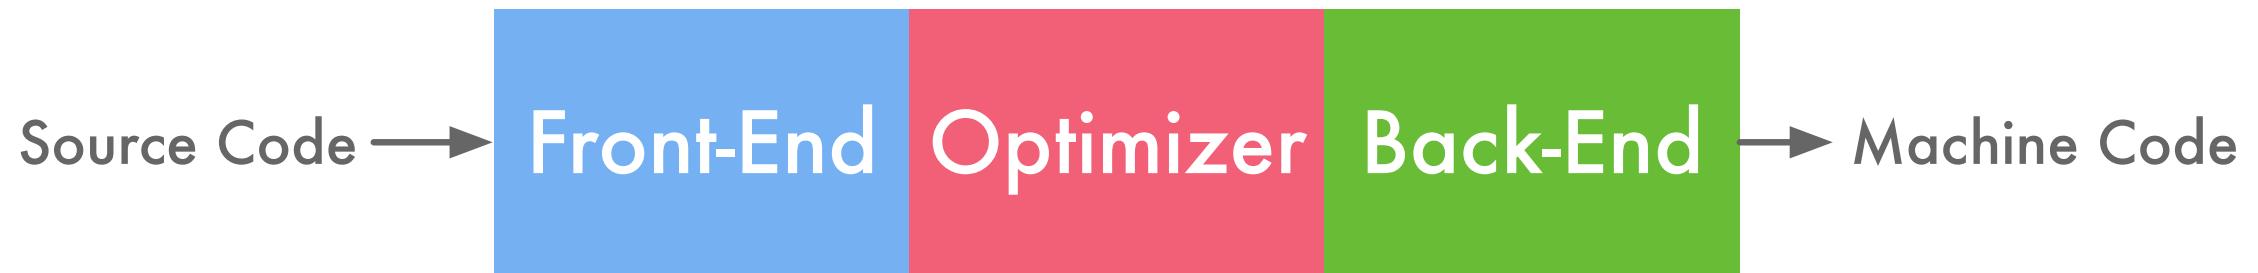

# Compiler basic constitution 编译器基本构成

- Front-End : 主要负责词法和语法分析，将源代码转化为抽象语法树；

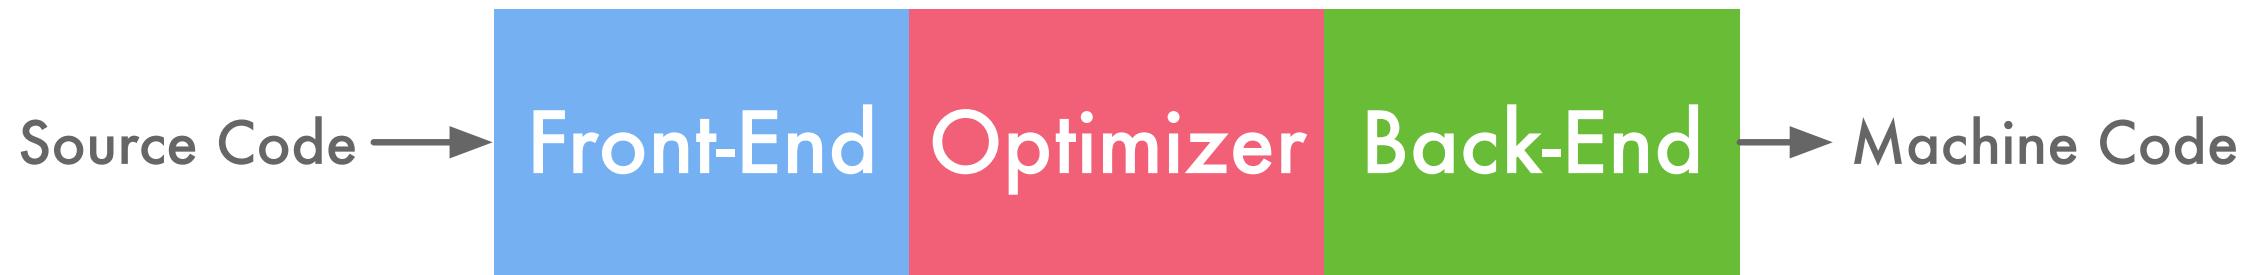

# Compiler basic constitution 编译器基本构成

- Optimizer：优化器则是在前端的基础上，对得到的中间代码进行优化，使代码更加高效；

# Compiler basic constitution 编译器基本构成

- Back-end : 后端则是将已经优化的中间代码转化为针对各自平台的机器代码；

# GNU Compiler Collection, GCC

- first released in 1987 by Richard Stallman, GCC 1.0 was named the GNU C Compiler since it only handled the C programming language.
- The GNU Compiler Collection (GCC) is an optimizing compiler produced by the GNU Project supporting various programming languages, hardware architectures and operating systems.

# Complicate Ecosystem

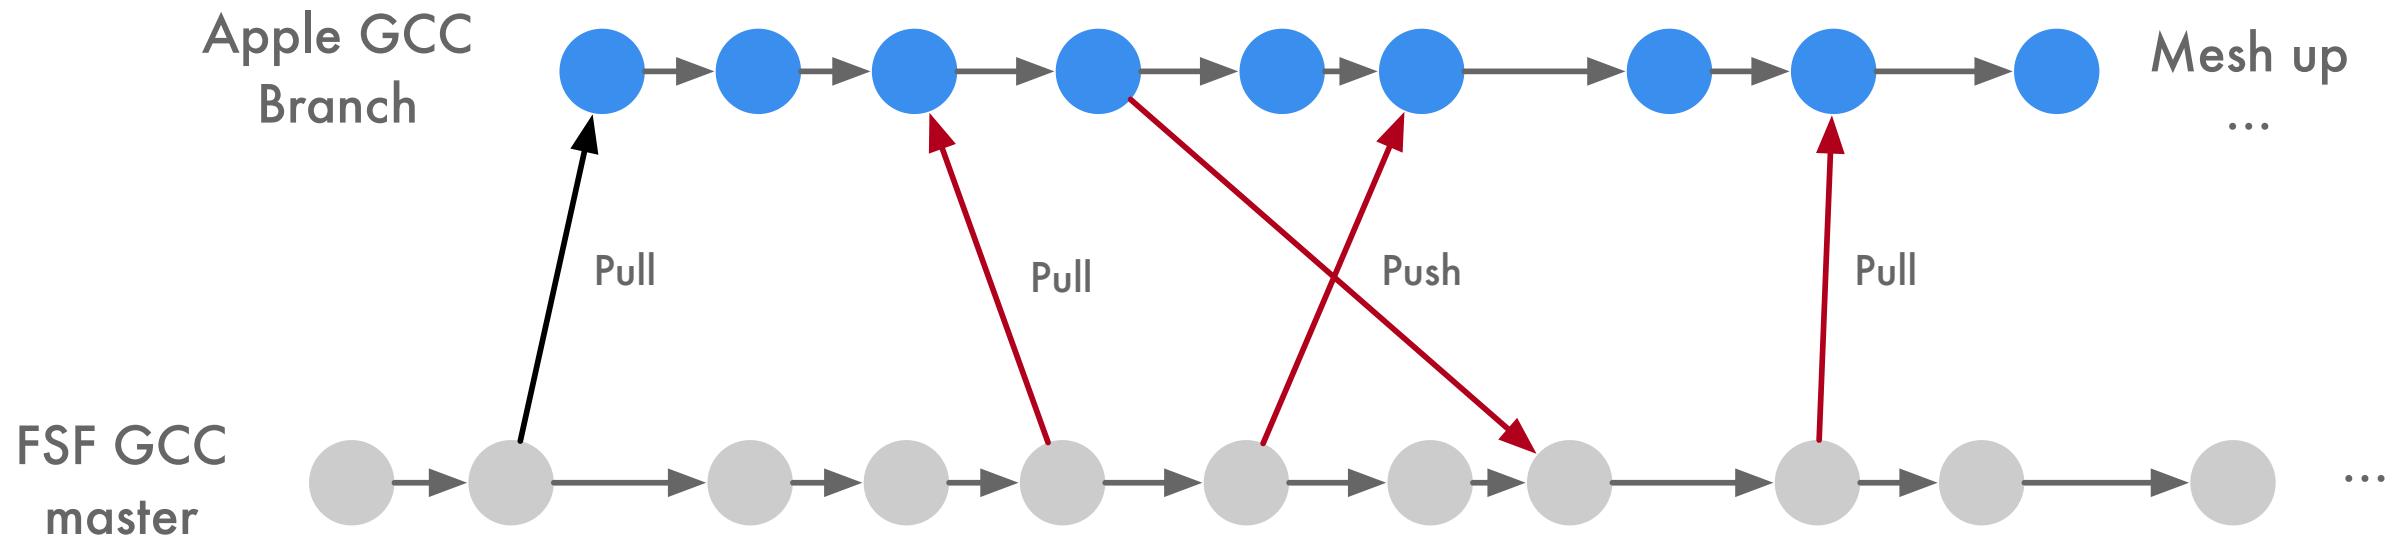

CPU	OS	Language
ARMv6	macOS	C
ARMv7	iOS	C++
ARMv8	watchOS	Objective-C
Intel X86	tvOS	Swift
PowerPC		

# Complicate Ecosystem

# Apple needs find a way out

GCC is developed for solving real problems,  
it has no time to make a good everything perfect.
